

**APPCLARITY** is the fastest, most cost-effective way to establish visibility and control of your software landscape and spend.

Do you know the truth about your IT landscape? Waste should not be an acceptable part of enterprise software licensing. **APPCLARITY** provides a single, accurate view of the software installed and active across the enterprise. An automatic process that enables you to proactively manage

software and licenses across the enterprise and down to an individual user basis, making IT delivery a leaner and more cost-effective proposition.

Stop paying for software you don't need. Stop letting your suppliers dictate vendor-audit negotiations. Get the truth about your IT landscape

**AppClarity: big picture, binary detail**

**“AppClarity has given us remarkable visibility of software licenses across all users in Sasol. We made tangible savings within days of deploying the solution – we achieved in literally a couple of days what we were not able to in 12 years.”**

Cobie Nel, IM Services: Manager Applications, Sasol

## Key Features

### **Accurate software inventory**

For PCs, AppClarity can leverage Microsoft System Center Configuration Manager to instantly obtain an accurate register of all applications deployed, or the inventory can be captured directly from PCs. In the data center, AppClarity remotely and agentlessly discovers servers and identifies all installed server software using agentless inventory mechanisms such as iQSonar from iQuate. iQSonar is the industry-leading discovery and inventory platform built to handle highly complex multi-location, virtual, physical and cloud-based environments.

### **Normalized View of Applications**

For all data sources AppClarity filters out irrelevant records and variances in publisher and product names are normalized. All this information is easily consumable via a single console for all software across the entire estate.

### **Detects Unused PC Software**

Every software install can be instantly analyzed by leveraging data from Microsoft System Center Configuration Manager to determine if it is used, occasionally used or unused. Alternatively where SCCM is not present, usage data can be captured from PCs using an agent. Either way, this powerful information is available at your fingertips for every software product in your PC environment.

### **Detects Unused Server Software**

Using patented 1E 'Useful Work' technology, as part of an unused server software solution, AppClarity can determine whether server software is doing any useful work or not. This allows identification of costly unused software which then be considered as part of a server reclamation, reassignment or decommissioning process.

### **Financially Quantifies Waste**

AppClarity provides reporting with actionable results without having to review pages of data. All unused software is collated into one report which financially outlines the total waste and potential savings. The Unused Software Report is a business case detailing the waste and the steps to take action.

### **Automatically reclaims and recycles licenses on PCs**

Unused applications can be harvested from PCs using a policy-based approach. When a software installation is unused it can be reclaimed automatically or with user consultation using an intelligent opt-out process. Savings achieved through this software license optimization initiative are tracked and reported via AppClarity's single console.

### **Restricts the use of prohibited applications**

Administrators can set policies to prevent certain PC applications from being used within the environment. These can either be global or specific to a group of machines or users.

### **Simple traffic light compliance system**

AppClarity has a unique traffic light compliance system along with targeted vendor compliance reporting. By automatically reconciling deployed software with licenses purchased, AppClarity delivers fast, accurate and comprehensive liability and compliance reporting.

## Case study

### Benefits

In just one month Sasol was able to make savings of

**ZAR 1.8 million (\$260,000)**

Which accounts for

**3000**

Reclaimed licenses

### Sasol dramatically cuts software license costs across its IT estate

AppClarity reclaims unused applications to become compliant and save money. "AppClarity has given us incredible visibility into usage of software licenses across all users and we already made tangible savings within days of deploying the solution," says Cobie Nel, IM Services: Manager Applications, Sasol.

# Business Benefits

## Accuracy

AppClarity is the fastest way to achieve a true view of what software is installed and active across the enterprise. It provides the business with straightforward usage reports on a product by product basis, delivering clarity into license utilization, entitlements and inventory management. Software procurement and inventory management is quickly and easily reconciled with actual deployment

## Maximizes Savings

Fast to install and easy to use, AppClarity delivers real, measurable savings within days, not years. Proactive license management ensures that software is deployed where it is needed, reducing waste and unnecessary spend. The enterprise reduces cost by avoiding costly penalties and responding to audits with straight forward and accurate usage reports.

## Agile, Scalable and Secure

AppClarity enables granular software usage analysis from business units down to individual users. It provides the enterprise with the ability to proactively manage its software and licenses, keeping the environment clean and in order with fully automated processes ensure the removal of unused, unauthorized and prohibited software

## Customers

APPCLARITY is deployed across many companies worldwide, these include:

**3M**  
**APTAR GROUP**  
**CIGNA**  
**ERM SAINT-GOBAIN**

**LONG VIEW SYSTEMS**  
**SASOL**  
**TEXAS COMMISSION ON**  
**ENVIROMENTAL QUALITY**
